

APP3000 Parking Management System Layout

- All local and remote workstations provide full monitoring and control of the entire parking facility; running and printing all revenue and statistical reports; video surveillance
- All local and remote workstations need only Web browser to operate. No need for special software.
- All local and remote TCP/IP connections are 128-bit encrypted
- All types of TCP/IP media are supported – wired, wireless or fiber-optic
- All types of Internet connections are supported – dial-up, ISDN, DSL, Cable, Satellite, T1

APP3000

Parking Management System

Main Features

GMG Systems presents APP3000 - the complete revenue and access control solution for automated parking garages. APP3000 provides secure centralized Web based administration and reporting for single or multiple parking locations connected through an encrypted Internet connection.

All GMG products are based on secure LINUX® platform and powerful Java™ technology which enables the design of a fundamentally different type of parking system

Main features distinguishing APP3000 from the rest of the parking equipment vendors:

- True Web-based user interface for local or remote management. Only a web browser is needed to access the parking management software locally in the garage or through a remote connection.
- Full system functionality available through the web interface, not only partial modules adapted for web access. Unlimited number of client workstations from any type can connect to the server - Microsoft Windows® PC, Apple Macintosh®, Linux®, Handheld PDA.
- All products are based on Linux® OS and Java™ technology. Therefore - no third party license fees for server and database modules.
- Ethernet TCP/IP communication between all pieces of parking equipment.
- Built-in image processing and video capabilities in all system components. Picture snapshot for each entry and exit. Pictures are shown in the cards/tickets activity reports.
- Built-in real time speech synthesis and audio playback capabilities in all system components. Custom messages for monthly cardholders.
- Integration of multiple parking facilities in a central management location via secure Internet or Intranet connections.
- Powerful access card system. Unlimited number of access cards. All industry access cards standards are supported and can be used simultaneously.
- 128-bit data encryption in all phases of information collection, transmission and storage.
- Report output export to major database formats, including Microsoft® Office Excel®.
- Unlimited number of revenue and activity records stored for the lifespan of the system.
